5. PROCESSING INFORMATION

General

For printing with XSK-S colours ester resistant photo polymer print plates or ester resistant rubber print plates have to be used.

For working in counter printing

Please avoid to shrink printed capsules onto bottles with residues of wine due to the filling process. The long-term influence of the wine (wine acid etc.) to the print can cause a set-off to the neck of bottle.

In this connection we advise not to use a low-grade cork quality because in this case we are not able to undertake any liability.

6. SHELF LIFE

We guarantee a shelf life of six months. For metallic inks as well as gold and silver we guarantee a shelf life of three months in original and closed containers.

Rust protected containers have to be used.

7. PRECAUTIONS

For further information on the safety, storage and environmental aspects please refer to the Material Safety Data Sheet(s) (MSDS).
